

Cross-border programmes

THE ECBS PLATFORM GIVING ACCESS TO THE ECBS CATALOGUE WILL OPEN SOON

As part of the work of the Intellectual Output O1 "Catalogue of existing devices and tools that allow the acquisition of cross-border skills", the partners of the ECBS project have made an inventory of all the existing devices, tools and programmes they offer which allow the acquisition of cross-border skills to their users.

As a result of this inventory, ECBS partners have implemented the **ECBS Catalogue of programmes and tools developed in cross-border context**.

The objectives of the ECBS Catalogue:

- * To enhance and highlight the programmes offered by each partner to its own academic community (students, faculty members and administrative staff),
- * To facilitate the exchange of experiences and good practices among partners of the ECBS project and also towards other European higher education institutions involved in cross-border projects and collaborations.

The ECBS catalogue is available:

1. In a PDF document: [ECBS Catalogue of programmes and tools developed in a cross-border context](#)

2. Will be soon available in the [ECBS Platform](#): a map allows users to visualize which are the devices, tools or programmes, set up by the universities about cross-border cooperation.

The ECBS Catalogue has been built on the basis of a survey campaign held during Spring 2018. The database has been frequently updated since this survey. It does not intend to be exhaustive. Instead, ECBS partners aim to collect as many data as possible on this topic in order to help bring ideas to any higher education institution which may want to develop cross-border activities.
