
Intellectual Outputs

To achieve its objectives, the European Cross-border Skills project is structured around four main parts called Intellectual Outputs:

The Intellectual Output O1 - Catalogue of existing devices and tools that allow the acquisition of cross-border skills

The first part aimed to implement a catalogue of some devices implemented by the partners involved in the ECBS project in their cross-border context. In this way, it appears as a shared space for experience and good practice exchange, also available to other higher education institutions located in different European cross-border areas. This catalogue may also be useful for students.

More details

The Intellectual Output O2 - Framework of cross-border skills

The goal of the second part was to establish a framework of skills which could be useful in a cross-border context. This framework is now available and can be downloaded.

More details

The Intellectual Output O3 - Certificate of cross-border skills

The third part of ECBS project was devoted to propose a certification scheme and a validation process for the recognition of these skills. Since the involved higher education institutions belong to different countries, with their own legislation, the specificities of each partner have been taken into account to define an assessment process.

The Intellectual Output O4 - Platform

Finally, an online platform is developed to facilitate the process for the user to get their recognition of useful skills in a cross-border context.
